

FCC ID: WCH99956BT

Environmental evaluation and exposure limit according to FCC CFR 47 part1, §§1.1307, 1.310.

FCC §1.1310 limit of power density for general population/uncontrolled exposure is 1 mW/cm².

The power density calculation is $S = (P_t / 4\pi r^2)$.

Where:

P_t - The transmitted power EIRP (mW)

r - The distance from the unit. (cm)

The limit 1mW/cm² can be calculated from the above based on the following data:

P_t- the transmitted maximum EIRP power = 1.6 dBm = 1.44 mW.

Maximum allowed distance “r”, where RF exposure limits may not be exceeded = $\text{SQRT}(1.44/4\pi)$ and is more than 0.4 cm from the tested unit.

Peak power density for distance 20 cm is: $P_t/4\pi r^2 = 1.44 \text{ mW}/4\pi \cdot 0.2^2 = 0.00029 \text{ mW/cm}^2$. That is less than 1 mW/cm² power density limit.
